Beschreibung

Very Simple Template allows you to dissociate very simply HTML code from PHP code.

A programmer will easily rewrite an HTML project done by a graphist and turn it into a VST template.

VST uses a comment tag system. So the graphist can edit the VST template with the software he likes !

- # meta VST tags are HTML comments.
- # HTML block repetition with VST layers.
- # code replacement.
- # tag rewriting.
- # partial layer rendering.
- # memory or file rendering.
