Description

phpSorm is mainly a base-class which provides a simple way to **map a table from a relational database to a PHP-object**. The extended functionality includes **automatic conversion-functions** and **template-support** (for phplib templates). Upcoming is also an easy to use **MySQL-Fulltext-search** on your objects.

phpSorm is intended as a straight-forward approach for small to medium projects. It is not tuned for performance but rather for ease of usage. License: OpenSource/LGPL
