### Description

phpShop is an electronic commerce package written in PHP 3.x using the PHP Base Library (PHPLIB). The goal of phpShop is to create a system capable of performing all of the functions needed to do business online. Some of its key features include: Web-based Administration with Vendor Maintenance, Product Maintenance, User/Shopper Maintenance, Order Maintenance, Function Register, and Directory Register; and Flexible store building using PHPLIB, and phpShop functions.
