Description

123WebMessenger is a web-based instant messaging software, it creates a Facebook-like IM network for your own website, fully integrated your existing user database and improves one to one chat function for your website users. The Admin Panel helps you to manage the IM efficiently. The joy of sharing file or picture comes with the optional file transfer module. * Benefits It brings the website to life, make it interactive between users. It retains members and increases users loyalty, so it's ideal solution for users oriented website like dating services or social networking services. * Technology 123WebMessenger is compiled with a Flash chat client and a full-featured Java server. * Integration and Single sign-on It can be easily added to your CMS like Joomla, skadate, phpFox, phpBB, vBulletin, I.P. board, etc., so that your site users don't have to double register or double login to talk to the other users. Version 2.5 new feature highlights: * The loading speed is 50-75% faster than before! * Optimized facebook chat bar, reduce conflict errors with website code. * Improved friend list, user may edit one's own profile or check other's profile if it's configured so by admin. * More powerful admin panel: more buttons ON/OFF can be controlled by admin. * Bug fix.
