**Description**

From preface of the PHP manual, the following states the definition of PHP scripting: "PHP is an HTML-embedded scripting language. ... The goal of the language is to allow web developers to write dynamically generated pages quickly."

The phrase "HTML-embedded scripting language" reminds me of my days in "dot-coms" ("dot-gones" for now). I was involved in the development of corporate portal sites. My working counterparts were mainly webpage and graphic designers with little or no programming knowledge.
