### Produktbild

### Description

This script was created for statistics gathering and analyzing of your web-site attendance.

Analysis and statistics include such parameters as hits and hosts for each site page, entry and exit points, visitors movements on site, full data about each visitor, reference pages(linking pages), ip, countries, languages, providers, screen, etc.

System requirements: PHP and MySQL

By using optimized , greatly packed data base you'll be able to keep and handle big data array quickly.

The given script effectively works both for sites with big traffic (hits) and with small one.
